

SINGLE PHASE TRANSFORMER

GENERAL DESCRIPTION

The db-tech DB-609SPT transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force or "voltage" across a second coil wound around the same core.

Specification

- Number of Phase : Single Phase
- Input : 110/220V
- Frequency : 50Hz
- Efficiency : High
- Power : 1000VA
- Low Noise
- Light weight
- Isolation Transformer
- Output connecting point facility (Banana type)
- High Isolation
